Work Eligibility

Top Talent Pass Scheme — Section C

Skills

AI / LLM Engineering: GenAI, LLM Evaluation, RAG & Semantic Search, Prompt Engineering, Agentic AI, Function/Tool Calling, LLM Orchestration, Model Selection, MCP

AI Tools & Services: Azure OpenAI, Vertex AI (Gemini), n8n, OpenClaw, Ollama, LM Studio, Opencode, Cursor

Languages: Python, JavaScript, C, C++, Java, Kotlin, System Verilog

ML & Data: TensorFlow, PyTorch, scikit-learn, XGBoost, Pandas, NumPy, PostgreSQL (pgvector), MongoDB / Azure Cosmos DB

Web & Tools: HTML, CSS, React.js, Django REST Framework, Git, Sentry, RESTful APIs, Azure, Google Cloud, Microsoft Excel, MATLAB, Postman, Metabase

Experience

AI Developer (Part-time), Ebullience Inc. Jun 2026 – Present

- Building the customer-facing AI chat feature for a compensation-data platform in C#/.NET and Blazor WebAssembly, an agentic assistant that queries the platform's data and configures client analyses through tool calling.
- Developed ~35 tools the agent calls to search compensation data, read packet contents, and create and configure benchmark studies, plus the system prompt and tool-selection behavior driving them.
- Built the supporting Azure services: Cosmos DB vector search with Azure OpenAI embeddings for the assistant's knowledge base, Azure AI Speech for voice input via JavaScript interop, and App Configuration for secrets and deployment config

AI Integration Specialist, Borderless360 Aug 2025 – Jun 2026

- Developed and maintained the AI-powered customer support chatbot for global logistics and e-commerce fulfillment platform, spanning pre-release testing and development, production launch, and post-release support.
- Owned the chatbot's integration layer in the core Django app: designed the API actions bridging chat prompts to real platform operations and maintained the knowledge base grounding its responses.
- Led pre-release QA — writing test cases, running end-to-end UI testing and regression debugging — and collaborated with the marketing team on the production launch.
- Wrote and tuned prompts for AI features across the platform, including ticket summaries and tracking-status mapping, and ran structured LLM evaluations benchmarking Claude, GPT, Gemini, Grok, Llama, Qwen, and others on cost, speed, and accuracy to recommend the best-fit model per use case.
- Built a fully functional MCP server connected to the chatbot and production n8n workflow automations integrating Front, Aircall, Google Meet, WeChat, and the internal API; authored Claude skills used daily by teams across the business.

AI Training Specialist, DataAnnotation.tech Feb 2024 – Aug 2025

- Reviewed and assessed coding-related responses generated by a large language model (LLM) to ensure accuracy and relevance.
- Provided detailed feedback to enhance the model's understanding and performance on technical topics.
- Focused on Python data science and machine learning topics, including libraries such as Pandas, NumPy, Matplotlib, and TensorFlow.

Intern, Ebullience Inc. Jun 2021 – Jan 2024

- Built Python pipelines to extract structured data from SEC filings, primarily DEF 14A proxy statements, later combining rule-based parsing with LLM prompting to improve extraction coverage.
- Stored and managed extracted compensation data in SQL databases and Excel for downstream review and analysis.

IT Support Technician, ResNet, UC Santa Cruz Aug 2020 – Dec 2021

- Provided on-call and in-person technical support for internet connectivity, hardware, and network issues across student housing, handling a high volume of requests.
- Diagnosed and repaired network devices, laptops, and other hardware at both the software and physical layer.

Education

University of California, Santa Cruz, B.A. Networks and Digital Technology Jun 2024

Certifications

- **Machine Learning Specialization** — Stanford University / DeepLearning.AI Jun 2024
